

Tidal cracks and floe edge stages around Igloolik, Nunavut

The base map was created from the National Topographic Service (NTS) map sheet 47A, 1:50,000 scale, UTM zone 18, NAD 83. Please note that place names (spelling and location) are shown as indicated on the NTS map sheets (because the official Inuktitut versions are not yet available). Maps were projected to Lambert Conformal Conic, NAD 1983, to show all results together (due to different UTM zones). Sea ice features are shown as drawn by interview participants (Charmaine Amurag, David Argenti, John Armstrong, Maurice Amarsuk, David Agasine, Zacharias Agasine, Theo Ilummeq, Eugene Iglood, David Inqut, Arsew Ivall, Enak Kumi, Nathan Quernig, Daniel Qutbik, Levi Quernig, Anthony Quernig, George Quernig, Asgett Palling, Harvey Palling, Asgett Tappagait, Abraham Ulayuk, and Louis Ulayuk), local sea ice experts, in November, 2004 and June, 2005. Map compilation by: Gita J. Laidlaw, Department of Geography, University of Toronto at Mississauga. Map printed in March, 2006.
