RESEARCH TRENDS IN
RESOLUTE BAY
BASED ON SCIENTIFIC RESEARCH LICENSES

Prepared by:
Alexis Polidoro, Alison Perrin, Charlotte Buttle,
Regena Sinclair, Gita Ljubicic

In collaboration with:
Jamal Shirley, Nunavut Research Institute
We wish to acknowledge everyone who has supported and contributed to the analysis of the Nunavut research licensing database.

Obtaining Information on Research Projects
All NRI license holders must provide a plain language summary of research activities completed each year. These summaries are published each year in the NRI compendia for research (see Resources p. 17). These annual summary reports are available in English and Inuktitut, and for some locations in Inuinnaqtun. They are meant to provide a snapshot of research fieldwork including when, how, and by whom, and what information was collected. To obtain summary reports for any research projects conducted in or near your community or region please contact the NRI Manager, Research Liaison (see contact information below).

Researchers' Ethical Obligations
Nunavummiut must be treated with fairness and respect. Researchers are required to abide by the laws of each community and to follow ethical principles and codes of conduct (see Resources p. 17). Researchers are expected to engage in culturally appropriate behaviour following local protocols. Researchers are responsible for learning what is respectful and responsible in the local context, as each community is different.

Your Rights in Research
Remember, you always have the right to refuse to participate in a research project even if your community has approved the research. Researchers must obtain your informed consent before they ask you any questions, and they must always respect your privacy and confidentiality.

It is against the law to conduct research in Nunavut without a license. Researchers must follow the terms and conditions in their research licenses and ensure their work does not cause harm or disruption to the community or to wildlife and the environment. Research licenses can be suspended or revoked, and a researcher may face fines or other penalties, when there is documented proof that research is causing harm.

If you have concerns that a researcher working in your community has not secured your informed consent, or may be causing harm or disruption, please contact the Nunavut Science Advisor (see contact below).

Did you know that the NRI only licenses about 60% of research happening in Nunavut?

Why we created this report
The goal of this report is to help Nunavummiut learn about who is doing research, what they are studying, and where. This report was developed by analyzing research summaries from NRI license applications. To learn more about the numbers presented in this report, see Understanding the Numbers (p. 16). This work is part of the NRI's ongoing efforts to:
1. improve Inuit engagement in research;
2. make research results more accessible to Nunavummiut;
3. reduce community research fatigue; and,
4. encourage research that addresses Inuit priorities.

Other Research Permits
Even when researchers have a license, they might require other approvals to conduct their project. Other approvals are usually required for fieldwork, depending on the location and type of research activity. Examples of other authorizations a researcher may need include:

- Review by the Nunavut Planning Commission (NPC) - for all land and water based activities;
- Screening by the Nunavut Impact Review Board (NIRB) - environmental impact screening;
- Authorization from the Nunavut Water Board (NWB) - to use water or deposit waste in the environment;
- Approval from Crown Indigenous Relations and Northern Affairs Canada (CIRNAC) - to use Federal Crown Lands in Nunavut for research purposes; and,
- Approval from a Regional Inuit Association (RIA) - to access or use Inuit Owned Lands for research purposes.

About the Nunavut Research Institute (NRI)
The NRI has been responsible for developing, facilitating, and promoting scientific research in Nunavut since 1994. The NRI works to ensure that research is a resource for the wellbeing of Nunavummiut (people of Nunavut).

Scientific Research Licenses
The NRI administers scientific research licensing under Nunavut’s Scientists Act. The Scientists Act only applies to research in the Physical and Natural Sciences (P), Health Sciences (H), and Social Sciences and Traditional Knowledge (SS), which is about 60% of all research that happens in Nunavut. Research on archaeology, parks, and wildlife (including all terrestrial and aquatic animals, plants, birds, and fish) is licensed under different legislation and is not included in this report.

The NRI’s Scientific Research Licensing Guidelines (see Resources, p. 17) provide information about the types of permits required for research in Nunavut, and how to apply for an NRI Scientific Research License in each discipline.

The NRI’s Scientific Research Licensing Guidelines (see Resources, p. 17) provide information about the types of permits required for research in Nunavut, and how to apply for an NRI Scientific Research License in each discipline.
WHERE RESEARCH IS HAPPENING

A research license is required for each year that a research project takes place in Nunavut. Projects that are conducted for longer than one year can receive a multi-year research license, and this must be renewed at the end of each year.

- **138** total projects occurring at field locations outside the community (but reviewed by Resolute Bay)
- **96** total projects in the community
- **59%** of projects
- **41%** of projects

In this report, research license numbers represent the individual license issued each year.

Research project numbers represent an individual project (which may hold several licenses over multiple years).

TOTAL NUMBER OF PROJECTS
RESEARCH LOCATIONS

Locations are based only on information provided in license applications, and may not represent all locations where field research occurred.
A Principal Investigator (PI) is the lead researcher on a project. The PI takes responsibility for submitting the license application, and making sure that the proposal is followed or adjusted as needed. The PI often lists other research team members in their application. However, numbers shown here only represent the affiliation of the PI.

### Principal Investigator Affiliation

(From a total of 234 projects)

- Canadian University
- Government of Canada
- International College/University
- Consultants/Industry
- Hospitals
- Canadian Non-Profit Organization
- Nunavut Inuit Organization
- Institutions of Public Government
- Nunavut-Based Non-Profit Organization
- Canadian College

### Duration of Projects

(From a total of 234 projects)

- 1-Year: 55%
- 2-Year: 16%
- 3-Year: 12%
- 4-Year: 6%
- 5-Year: 4%
- More than 5-Year: 7%

8 Nunavut-based Principal Investigators
TYPE OF RESEARCH IN AND AROUND RESOLUTE BAY

DISTRIBUTION OF ALL PROJECTS BY DISCIPLINE

- Health Research: 29 projects (13%)
- Social Sciences: 31 projects (13%)
- Physical Sciences: 174 projects (74%)

PROJECTS OVER TIME BY DISCIipline

- SOCIAL SCIENCES AND TRADITIONAL KNOWLEDGE (SS)
- PHYSICAL AND NATURAL SCIENCES (P)
- HEALTH RESEARCH (H)

DURATION OF PROJECTS BY DISCIPLINE

INTERDISCIPLINARY PROJECTS

- 1-Year: 1 project
- 2-Year: 12 projects
- 3-Year: 5 projects
- 4-Year: 33 projects
- 5-Year: 1 project
- Over 5-Year: 0 projects
### TOP 10 RESEARCH TOPICS

Research topics refer to the focus of a research project.

*Some of the projects licensed by the NRI address topics related to wildlife, plants and fish. However, research on wildlife, fish, and plants is not directly licensed by NRI (see About this Report, p. 2) and so the full scope of wildlife and fisheries research is not represented in this report.
### Top 10 Social & Health Research Methods (Out of 83 Projects)

1. Water Sampling
2. Sediment Sampling
3. Rock Sampling
4. Core Sampling
5. Ground Truthing for Remote Sensing or Aerial Surveys
6. Vegetation Sampling
7. Environmental Observation
8. Environmental Photography
9. Weather Monitoring
10. Ship-Based Research

---

Numbers shown on p. 8-9 only represent the research methods and reporting tools that were described in license applications (not all licenses included this information).
Community-connected projects are those that involve community members in some capacity, for example, as local guides, translators, or data providers. Community-partnered projects involve a research partnership between a Principal Investigator and community members or organizations where the community plays an active role in all parts of the research.

**License Review by Community Organization**

- **Hamlet of Resolute Bay** (55%)
- **Hunters & Trappers Assoc.** (44%)
- **Resolute Bay District Education Authority** (1%)

**Total License Reviews:** 925

Review numbers only represent local community organizations that received research license applications to review.

The Government of Nunavut, Nunavut Tunngavik Incorporated, Regional Inuit Organizations, Institutes of Public Government, the Government of Canada, and Non-Governmental Organizations also review research licenses. These could not be easily associated with communities and so are included in regional numbers (p. 13) and the Nunavut-wide report.

#### Total Licenses Reviewed by Community Organizations

- **Hamlet of Resolute Bay (Qausuittuq)**
- **Resolute Bay Hunters and Trappers Association**
- **Resolute Bay District Education Authority**

*District Education Authority* feedback is received by the Government of Nunavut Department of Education, not directly by the Nunavut Research Institute.

Most Social Sciences/Traditional Knowledge (SS) and Health (H) research occurs in communities, and most Physical/Natural Sciences (P) research occurs outside communities at field locations. We use the license review by Hamlet (or City of Iqaluit) to connect Physical/Natural Science research projects to community profiles. One project may occur in multiple communities, so these numbers are out of the total Hamlet reviews of 3408 projects.
Analysis of License Applications
The research numbers and trends shown in this report are based on the analysis of Scientific Research License Applications. If a full application was not available, the research summary from the NRI annual compendium was used. This means that the analysis only reflects what a researcher proposed when first applying for their license. The numbers do not reflect any final changes or adjustments that a researcher made when actually carrying out the project.

Types of Research
The research numbers and trends shown in this report only represent about 60% of the research that happens in Nunavut. This includes research in the Physical and Natural Sciences (P), Health Sciences (H), and Social Sciences and Traditional Knowledge (SS). Other kinds of research have a separate permitting process, and are not included in this report (see About this Report, p. 2).

Nunavut-led Research
Some scientific activities led by government agencies, Inuit organizations, and by individual Nunavummiut do not require licensing under the Scientists Act. For this reason, the number of Nunavut-led research activities is likely under-represented in the report. Refer to the NRI's Scientific Research Licensing Guidelines for a list of research activities that are currently exempt from licensing (see Resources p. 17).

Research Topics
For each project we reviewed the summary available in the license application, or annual compendium, to identify all topics relevant to the research (p. 7). This helped to identify the range of research topics covered in Nunavut, as well as to develop keywords that can be used to search research projects in the future.
